DEPARTMENT OF COMMUNICATION DISORDERS

"The Communication Disorders Department has helped positively shape the person I have become while at Truman by offering small class sizes, dedicated professors, undergraduate research opportunities, and a close-knit student support system. The professors genuinely care about the success of their students, which is reflected in the time they devote to preparing for class, supervising the clinic, and mentoring students."

Michelle Krahenbuhl, Class of 2015
 Pursued at Truman: Communication Disorders; Clinical Practicum
 Study Abroad: Costa Rica (Summer 2013); Mexico (Faculty-led Communication Disorders program, May 2014)
 Currently pursuing: Graduate program in speech-language pathology
 Hometown: Blue Springs, Missouri

Improving Lives by Improving Communication

Explore the nature of typical and atypical speech. Taking classes from Phonetics to Audiology, you will study speech, language, and hearing. From your first semester, you will spend time observing in our Speech & Hearing Clinic. As a teaching clinic, it provides experience for students and services for clients from throughout the region.

The program's highest priorities are teaching and advising, ensuring that you receive individualized attention throughout your education. From the start, you will have a Communication Disorders professor as your advisor. With 140 students in the major, you will be a part of a tight-knit learning community.

The options for getting involved are limitless. Join the Communication Disorders Association. Take advantage of research opportunities, from applying for grants to joining a volunteer student research group that studies new technologies in clinical use. Study abroad in Mexico with your peers during the May interim and get experience in your field.

Prepare for a life that makes a difference.
